

Personal Data (89.7%), Third Party (79.4%):

For my paid apps and Google Play Pass apps they are as simple as one: I do not track a thing that can be referenced back to your personal information.

Data Subject (60.9%):

Looks like you are here to check on my apps privacy policies.

Third Party (71.8%):

But ... I use a well know ad provider (Google) who I ask not to track you (sample solution: [here](#)) For some apps, where I see this as a valid extra, things are as complex as one, two and three: I do not track a thing that can be referenced back to your personal information.

Consent (95.7%):

But ... I use a well known ad provider (Google) and upon app start am either asking for your consent for personalized ads (where Google allows) or its stated in the App Store / Google Play (check there if you see no consent dialog upon app start).

Personal Data (83.9%), Processing (94.7%), Recipient (74.2%):

In result your device identifier may be shared with my ads provider.

Personal Data (76.6%), Processing (96.6%):

You can easily see you are using a one/two/three kind of app if you saw the consent dialog or App Store / Google Play mentions the Device ID being collected.

Non-Personal Data (98.2%), Required Purpose (71.7%):

Anonymous data: What I sometimes look at are anonymous stats like install count, usage metrics for my app, never with information that could be used to track back who did performed particular activity.

Non-Personal Data (67.9%):

Privacy Policy for my apps.

Consent (95.1%):

Consent change: In case the app you are using fall into the third bucket and you change your mind for the consent given upon first run, just reinstall it and change your consent.

Processing (85.0%):

I do not store anything (even the device identifier mentioned above) hence upon reinstall I consider you a brand new user.
